Kestrel Gateway: Incident Runbook

Severity levels. Severity 1 means all traffic is failing. Severity 2 means one route is failing. Severity 3 is a degraded but working service.

Escalation. A Severity 1 incident must be escalated to the on-call lead within 10 minutes. The incident review is held within 5 working days.

Rollback. To roll back a bad release, run the rollback job; rollback completes in about 3 minutes and keeps the last 4 releases available.

Failover. The standby region takes over after 3 consecutive failed health checks.
